

SPECTRA

Overview

To address the growing Diabetes population and the national efficiency and quality targets, Health Intelligence has developed screening and surveillance software, Spectra, which supports Diabetic Eye Screening Programmes and is certified by the national team.

We have been running DESP services for many years and understand the support Programmes require from the software. Therefore, over the past 10 years, we have designed and developed software that provides efficient and high quality support for DESPs.

Features of the Software

- CAP stage 2 certified
- Web based
- Manages patients within all care settings; annual screening, surveillance screening and Hospital pathways
- Modern user interface with innovative solutions
- GP Practice integrated solution

Screening

- Incorporates full screening clinic management functionality
- Built-in consent register to ensure Information Governance requirements are met
- Efficient block appointment allocation
- User friendly screening consultation, for example the clinic list highlights constraints to the Screener, such as a wheelchair user
- Compatible with all accredited camera models
- Image test shot functionality to check for camera artefacts

- Automatic image capture quality control via luminosity checks and alerts for the Photographer
- Automatic synchronisation of clinic lists, screening data and image sets

Grading

- Enables grading at all levels supported by image manipulation and annotation
- Feature based selection determining grading
- Intelligent grading queue management, to enable prioritisation

Reporting

- Comprehensive reporting including the Performance Report (previously Annual Report), Screening Trajectories, KPIs and the 19 QA standards

Failsafe

- Failsafe management suite which ensures patients are always in the correct status
- Hospital feedback module (web based) to support referral, referral acknowledgment, recording of outpatient consultation and treatment
- Web based access to full screening record for Hospital clinicians, including annotated images

Benefits of the Software

1. Fully supports the patient across all pathways
2. Software is in continuous development therefore we can be responsive to customer requirements
3. Fully compliant with NHS national standards
4. Link between primary and secondary care
5. Accessible with unlimited user licenses
6. Operates in online and offline modes
